SSD Global Solutions

About the Lean & Agile Project Management Workshop

Workshop – LAPM (Level 1) Certification

This workshop utilizes three phases and draws material from the book, Lean and Agile Project Management written by Terra Vanzant Stern, PhD.

Phase One is 2-Day classroom training. This training is conducted on-line LIVE or in person.

Phase Two (Report) Students who are not already certified project managers need to do a project report using our SSD PLC Report Template. A Project Charter Form (Request to to a particular project) is submitted for approval and then a the project report. Certified project managers or those with a degree in project management may submit an old report using the new PLC format.

Phase Three (Testing) Certified project managers may move directly to the LAPM-Level 1 Exam. Those not certified may want to review the study guide and take the practice test.

PHASE ONE – INSTRUCTOR-LED WORKSHOP OR ON-LINE LIVE PRESENTATIONS

Day One - Highlights

- The 3 Bodies of Knowledge in Project Management
- Principles of Process Improvement
- How Traditional Project Management Differs from Lean and/or Agile Management
- Identifying and Eliminating Speed Bumps/Waste
- Introduction to PDCA Process
- Introduction to the New Composite PLC Model

Day Two - Highlights

- Agile Primer
- Lean Primer
- Traditional Project Managements
- Tools that May Be Used in Various Stages of the PLC
- Process Capability
- Analytical Problem Solving
- Project Tracking

- Project Management

PHASE II

Submit a project using the PLC template demonstrating an understanding of the composite phases. This project may be hypothetical but needs to explain how certain tools may be used in each phase. The student does not have to use all the tools.

PHASE III

Students take an on-line timed test. A practice test is available. Study notes will be provided.
